

Geometry Unit 4

Test Review/Breakdown

Identify Special Angle Pairs – 4 Questions

Use a diagram to name a pair for the given description

1. Same-side interior angles.

$\angle 2$ and $\angle 8$

2. Alternate interior angles.

$\angle 6$ and $\angle 8$

3. Corresponding angles.

$\angle 6$ and $\angle 7$

4. Alternate exterior angles.

$\angle 3$ and $\angle 5$

Using Information and a Diagram to find missing angle measures – 4 Questions

5.) If $m\angle 6 = 85^\circ$, find $m\angle 4$.

$$m\angle 4 = 85^\circ$$

6.) If $m\angle 1 = 127^\circ$, find $m\angle 10$.

$$m\angle 10 = 53^\circ$$

Using the same Diagram make and solve equations – 2 Questions

5.) $m < 2 = 7x - 3, m < 5 = 6x + 8$

Eq: $7x - 3 = 6x + 8$ (Why?)

$$x = 11$$

6.) If $m < 4 = 11x - 2,$

$m < 7 = 14x + 7$

Eq: $11x - 2 + 14x + 7 = 180$ (Why?)

$$25x + 5 = 180$$

$$25x = 175$$

$$x = 7$$

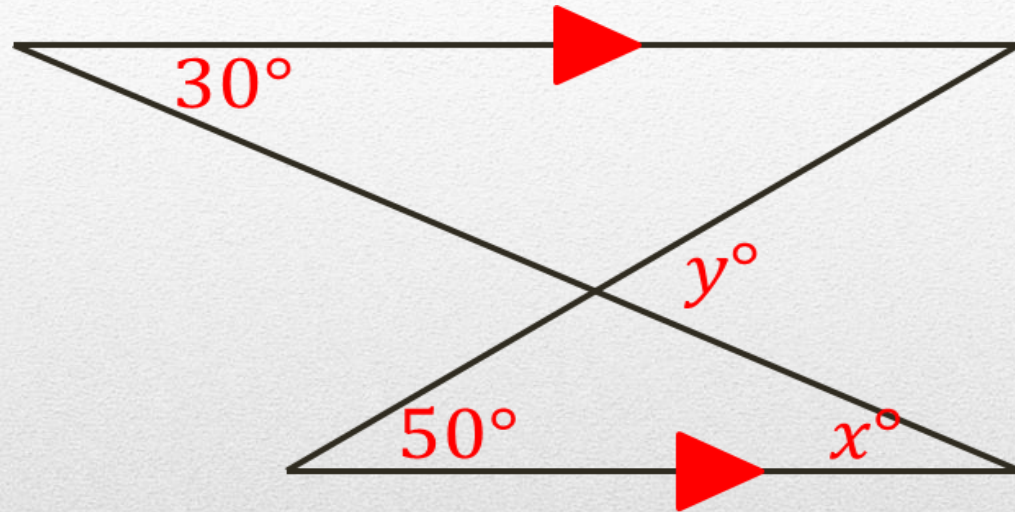

Given Parallel Lines, solve for missing variables – 5 Questions

For x : Notice that x and 30° are alternate interior angles. Thus

$$x = 30$$

For y : y is an exterior angle of the top interior angle from the bottom triangle. So by theorem 3-12 we can write

$$\begin{aligned}50 + x &= y \\50 + 30 &= y \\y &= 80\end{aligned}$$

Parallel Lines Worksheet

- Use the given information to name a pair of segments that must be parallel. If no such segments exist, write *none*.
- Hint: Use the Angles given in the problem. If they correctly make one of the special pairs we talked about in class (Alt. Int. \angle 's, Alt. Ext. \angle 's, S-S Int. \angle 's, or Corr. \angle 's) then you do have parallel segments.

1. $m\angle 2 + m\angle 10 = 180$

$$\overline{AF} \parallel \overline{BC}$$

2. $m\angle 1 = m\angle 4 = 90$

None

3. $\angle 6 \cong \angle 7 \quad \overline{EF} \parallel \overline{CD}$

Proofs – 2 Questions

You will have two proofs to fill in. You will have some statements and reasons filled in, then you fill in the rest.

Given: $\overline{DF} \parallel \overline{BC}$

Prove: $m\angle 3 + m\angle 1 + m\angle 2 + m\angle 4 + m\angle 5 = 180$

Statements

Reasons

1. $m\angle 3 + m\angle 1 + m\angle 2 + m\angle 4 + m\angle 5 = 180$

1. \angle 's of a Triangle add to 180

2. $\overline{DF} \parallel \overline{BC}$

2. Given

3. $\angle 1 \cong \angle 5$ or $m\angle 1 = m\angle 5$;
 $\angle 2 \cong \angle 4$ or $m\angle 2 = m\angle 4$

3. w/parallel lines, corr. \angle 's are \cong

4. $m\angle 3 + m\angle 1 + m\angle 2 + m\angle 4 + m\angle 5 = 180$

4. Substitution Property
